SUMMARY

Results driven Senior Programming Analyst and Product Owner with over 14 years of experience in software development, data integration, and agile delivery across diverse technologies and enterprise platforms. SAFe Certified Scrum Master and DevOps Practitioner, skilled in leading agile transformations and delivering scalable, high-impact solutions.

Combines strong technical expertise with proven leadership, stakeholder communication, and cross-functional collaboration. Experienced in the full software development lifecycle from analysis and design to development, deployment, and support. Adept at aligning business goals with technology strategies and navigating complex challenges with a hands-on, solution-oriented approach.

WORK EXPERIENCE

Product Manager, CGI

Dec 2017 - Present

As a Product Manager and Product Owner, Dinesh lead the development and evolution of CGI's Collections applications, including Collections 360, Strata, and the Collections Self-Service Portal. My role involves strategic planning, team leadership, and stakeholder management to ensure product success and alignment with business objectives

- **Enterprise-Level System Integration:** Led a major system integration between CGI's collections applications and the bank's core systems, establishing seamless end-to-end connectivity.
- **M&A Application Migration:** Spearheaded the migration of applications during a high impact client merger, coordinating efforts across multiple teams to ensure a smooth transition.
- **Enterprise Service Integration:** Lead application integration efforts across multiple services and teams to enhance interoperability and performance
- **Software Customization & Development:** Led the design, development, and testing of custom enhancements for Collections 360, ensuring seamless integration with client systems
- **Team Leadership & Mentorship:** Manage a team of software engineers, overseeing hiring, project assignments, and career development. Provide technical leadership, code reviews, and mentorship to enhance team capabilities.
- **Strategic Product Ownership:** Act as the Product Owner and Scrum Master, maintaining the Rally board, managing the product backlog, and facilitating cross-team collaboration to align development efforts with business goals.
- **Agile & Process Optimization:** Conduct daily stand-ups, sprint planning, and retrospectives, ensuring a seamless Agile development process. Contribute to Scrum of Scrums (SOS) coach syncs to improve Agile adoption across teams.
- **DevOps & TFS Pipeline Management:** Designed, developed, and maintained TFS pipelines, including CI/CD pipeline creation, deployment automation, and build management to streamline development and ensure efficient code deployment
- **Cross-Team Collaboration:** Work closely with business analysts, project managers, and stakeholders to refine requirements, estimate workloads, and proactively identify and mitigate risks
- **Innovation & Technology Evaluation:** Continuously evaluate and implement new tools and best practices to optimize system performance, development efficiency, and process automation.

Custom Solutions Developer, CGI**Feb 2017 - Dec 2017**

Dinesh worked on enhancing CGI Collections software at AT&T by designing, developing, and testing customizations. He focused on performance improvements along with customizations.

- Designed and developed UI and batch customizations.
- Authored technical design documents.
- Performed unit testing of enhancements.
- Implemented performance improvements to the system.
- Tech Stack / Skills: Java · JavaScript · Oracle · OpenShift · TFS · CGI CACS · Collections 360

Senior Technical Consultant, CGI**Oct 2016 - Feb 2017**

At Regions Bank, Dinesh worked as a senior consultant on the CGI Collections project. He developed a batch automation tool with a user interface, wrote automation scripts, and prepared detailed configuration and installation guides.

- Built a batch automation tool with UI for CACS.
- Developed data translation scripts, authored WebSphere and C360 installation/configuration instructions.
- Provided direct support to the client team
- Tech Stack / Skills: Java · Apache Ant · Perl · Oracle · WebSphere · CGI CACS · Collections 360

Senior Software Engineer, CGI**Oct 2015 - Oct 2016**

Contributed as a Senior Software Engineer to the STAARS ERP modernization initiative for the State of Alabama, focused on enhancing CGI Advantage systems. Worked across application development, system configuration, and reporting to support custom state-specific functionality and improve operational insights.

- Maintained and enhanced the Advantage ALM (Issue Tracking & Management) tool.
- Delivered custom code packages to extend Advantage features for state-specific business rules.
- Created technical design documents for all major modifications, supporting compliance and maintainability.
- Configured complex WebSphere environments, including SIB setup, clustered deployments, and secured domains.
- Improved end-user decision-making through integrated reporting solutions using SAP Business Objects tools.
- Tech Stack / Tools: Java · JSF · PrimeFaces · Oracle · WebSphere · JBoss · SAP Business Objects (WebI, Universe Design Tool) · CGI Advantage

Integration Engineer, CGI**Aug 2014 - Oct 2015**

Supported the transition and systems integration for multiple state healthcare cooperatives (Louisiana, Kentucky, and West Virginia) migrating to a new vendor platform. Focused on secure data exchange, automation, and infrastructure coordination to ensure smooth migrations and continuity of operations.

- Developed automation tools for secure data transfer using Java and Perl.
- Administered SFTP and SQL Server environments to support daily data exchange and batch processing.
- Utilized GoAnywhere Director to streamline job automation, scheduling, and secure file transfers.
- Authored and contributed to technical design documents for change requests and enhancements.
- Tech Stack / Tools: Java · Perl · SQL Server · GoAnywhere · Spring MVC · jQuery · JavaScript · Web Services (SOAP)

Software Developer, CGI**Feb 2014 - Aug 2014**

Led custom development efforts on the CGI Advantage platform as part of Arizona's BREAZ initiative to modernize financial and administrative systems across state agencies. Responsibilities spanned technical design, integration, testing, deployment, and cross-agency collaboration to deliver scalable, secure, and compliant solutions.

- Developed complex custom functionalities and authored technical design documents.
- Integrated LDAP authentication and connected CGI Advantage with external systems.
- Led JIRA setup, application deployments, and environment readiness tasks.
- Conducted unit and system testing to validate customizations and ensure performance stability.
- Collaborated with stakeholders across multiple state agencies to gather requirements and align on implementation goals.
- Tech Stack / Tools: Java · JavaScript · jQuery · AJAX · Microsoft SQL Server · Apache · WebSphere · JIRA

Programming Analyst, CGI**Dec 2011 - Feb 2014**

Contributed to the MI360 healthcare compliance initiative by developing core features and integrations within a service-oriented architecture.

- Developed and enhanced application modules using Java, JPA, and Struts 1.3.
- Built and consumed SOAP/RESTful web services for inter-system communication.
- Designed and generated reports using JasperReports and iReport.
- Led front-end development with JSP, jQuery, AJAX, and Dojo.
- Managed deployment tasks on JBoss 5/7 servers and supported release builds.
- Provided ongoing maintenance and support for both application logic and reporting components.
- Tech Stack / Tools: Java · Struts 1.3 · JPA · JAXB · JSP · jQuery · JavaScript · AJAX · DOJO · SOAP · REST · JasperReports · SQL Server · JBoss · CVS

Java Developer, Impact Innovations Inc**Jan 2011 - Dec 2011**

Contributed to multiple Documentum-based enterprise content management (ECM) projects, focusing on system upgrades, custom component development, business logic implementation, and scanning solution integration.

- Developed custom components, configured permission sets, value mappings, and presets.
- Used Forms Builder and Process Builder to design workflows and user forms.
- Created TBO (Type-Based Objects) and SBO (Service-Based Objects) to apply custom business rules.
- Rewrote legacy modules and features using VB.NET for compatibility and performance.
- Replaced legacy scanning solutions with EMC Input Accel 6.5 for improved capture efficiency.
- Authored and executed test scripts to validate upgraded applications individually.
- Designed and implemented client support architecture for streamlined issue tracking
- Tech Stack / Tools: Java · Documentum 6.6 · Webtop · DQL · API · VB.NET · Input Accel 6.5 · Content Server · Forms Builder · Process Builder

CERTIFICATIONS

- Certified SAFe® 6 Product Owner/Product Manager
- Certified SAFe® 6 Scrum Master
- Certified SAFe® 6 DevOps Practitioner
- Microsoft Certified: Azure AI Fundamentals
- EMCPA Associate - EMC Content Management Foundations
- PMP certification

EDUCATION

Master of Science

Aug 2008 - Dec 2010

Kansas State University

- Major in Computer Science.
- Thesis on "Comparative text summarization of product reviews" using Machine Learning.

Bachelor of Technology

May 2004 - April 2008

Osmania University

- Relevant coursework in Computer Science.
